Who is FAME Team?

PROJECT COORDINATOR AND PARTNERS MAP

7 partners from different European countries got together for a common purpose: to boost SMEs' skills for adopting ICT-enabled Advanced Manufacturing Technologies (AMT).

Do you know ADVANCED MANUFACTURING TECHNOLOGY?

FAME gives answers to SMEs!

The main scope is fostering the adoption of ICT-enabled AMTs by European SMEs. While AMT are widely recognized as key to industrial competitiveness, growth and job creation in Europe, various barriers and low-readiness factors in the EU lead to low levels of adoption in companies, especially those of the SME sector. These skills will help them exploit the benefits of AMT including product cost reduction, products and services quality improvement, employees' productivity improvement and the reduction of production lead time. In general, SMEs and micro-SMEs lack the knowledge and resources to break through the AMT barriers. There are though some sectors in which EU SMEs can benefit the most, and sectors in which SMEs need to be supported the most, in order to ensure their financial viability.

Following these results FAME will focus on the below sectors

- ▶ Food and Beverages
- ▶ Wood industry
- ▶ Metal industry
- ▶ Electronic & Electrical Equipment

2nd Transnational Meeting, Thessaloniki, Greece

The FAME team is on its way to success!

On July 10th – 11th, 2019 the second transnational meeting of the project took place in Thessaloniki, Greece. Fruitful discussions took place and the projects progress and future goals were discussed. The partners also had the opportunity to take a first glimpse of the training platform and the algorithm being developed to offer a personalised training to the target SME groups.

Also, during the two-day meeting the partners had the opportunity to work together

and adapt the previously developed training activities to the generic training strategy promoting thus a unique training framework.

The team has created specific training modules that will be delivered to the targeted SMEs as part of vocational training modules, based on their specific needs which were documented in National Surveys prepared by each partner.

The agreed training modules that will be delivered fall

under the following categories:

- VR / simulation in production reconfiguration
- VR / simulation in product design
- Supply chain management
- Optimization of production networks
- Product Lifecycle Management
- Enterprise Resource Planning
- Mass customization
- Cyber-physical systems, intelligent components.
- Cloud manufacturing

FAME future goals

Delivering a high-quality personalised training to SMEs!

During the next few months FAME partners will be working eagerly to prepare the training modules that will be delivered as part of the FAME training. A high-quality output will be maintained as all modules will be reviewed and tested internally before delivering them to SMEs. FAME partners carefully developed the module concepts based on their individual expertise, thus ensuring a professional end product. Note here that all training modules will be personalised according to the research conducted for the need of each SME sector of interest.
